- ⑥ Power switch
- ⑦ Foot switch outlet
- ⑧ Power cord outlet (Including fuse)
- ⑨ Throttle valve

Service and Warranty

Transforming Technologies, LLC provides a limited warranty for the Model IN4000PE ionizing air nozzle. All new products are guaranteed to be free from defects in material and workmanship for a period of one (1) year from the date of shipment. Liability is limited to servicing (after evaluating, repairing or replacing) any product returned to Transforming Technologies. The company does not warrant damage due to misuse, neglect, alteration or accident. In no event shall Transforming Technologies be liable for collateral or consequential damages.

To receive service under warranty, please contact Transforming Technologies Technical Support.

About Transforming Technologies

Since 1998, Transforming Technologies has helped electronic manufacturing facilities to protect their products and processes from the many serious problems associated with static electricity.

Transforming Technologies offers a wide range of unique and outstanding products to detect, protect, eliminate and monitor electrostatic charges. Our products are integral components of an effective static control program.

Description

Ionizing Air Nozzle Model IN4000PE

The IN4000PE Airflex ionizer combines exceptionally fast static decay capability with excellent balance stability, all in a small footprint. Designed to protect most static sensitive devices, the IN4000PE uses a specialized piezoelectric technology that makes all the Ptec™ ionizers so reliable. The height and angle of the nozzle can be easily adjusted with a metal snake shape tube, which is very convenient to operate. A proximity sensing photoelectric eye controls power and air flow for hands free operation. The main unit of the device is equipped with a small HV power unit. No external HV power unit and HV wiring is needed.

About Ptec™ Technology

A specialized piezoelectric high voltage transformer makes Ptec™ ionizers among the most reliable products available. Ptec™ ionizers are designed to remain in balance and to alarm when the HV output affects performance. The model IN4000PE ionizing air nozzle produces a 68KHz AC output of approximately 2200V and a continuous stream of balanced air ions. Ionizers that use Ptec™ technology do not require calibration and only minimal maintenance.

Features

The IN4000PE features the inherently stable output of all Ptec™ Ionizers and high frequency AC (68KHz) ion emission. The flexible metal neck, with multiple nozzle options allows for easy operation and service of emitters. A proximity sensing photoelectric eye and .01 micron filter combine to deliver clean air at the correct pressure when

Features cont'd.

- Small, light design in shape.
- The device incorporates with an ultra-small HV power unit. It has no HV wiring, so it is safe and convenient to operate.
- The height and angle of the nozzle can be easily adjusted.
- Proximity sensing photoelectric eye controls both electric power and air supply.
- It is equipped with an ionization indicator light (green) and an abnormal HV indicator light (red).
- The device is equipped with auto ion balance. Within 10V
- Special alloy discharge needle, more durable than tungsten ones.

Power Requirements

The main unit of the device is equipped with a small HV power unit. No external HV power unit and HV wiring is needed.

Operation and Use

The IN4000PE can be operated in areas where humidity is 20-70% RH (Non-condensing). Excess humidity may affect ionizer performance. The temperature range for the IN4000PE is 65-78°F (18-25°C).

Photoelectric Eye

The device is equipped with proximity sensing photoelectric eye with a 30cm range. Distance can be adjusted with the sensitivity screw located on the top of the sensor.

Specifications

Power supply volt	AC 100V~240V 50/60Hz
Output HV	AC2200V
Safety Performance	Abnormal HV Alarm
Temperature Range	0~40°C
Air Pressure Range	28-100 (psi)
Ozone Density	Less than 0.01ppm
Ion Balance	0±30V
Indicators	ON/OFF: red LED, POWER: green LED
Controls	On/Off button
Certifications	

Caution

When adjusting the angle the IN4000PE nozzle, grip the metal snake neck only. **DO NOT** grip the plastic nozzle. Using the plastic nozzle to adjust angle may cause physical or internal dam-

Filter Installation

The FL0020 air filter is installed inline with the air tubing. It can be installed inline before the air tube enters the IN4000PE or it can be installed in the base. To install in the base, unscrew the bottom plate and locate the blue air line. Cut the tube and install the filter. Periodic replacement of the air filter is recommended for optimum performance of the ionizer. Examine the filter for any evidence of contamination. The filter will turn red if there is any oil contamination. If there has been moisture build-up, there will be a change in air volume or a brownish color to the filter. If either of these conditions exist, you should replace the filter by unsnapping connectors. Depress air line connectors allowing removal of filter.

Service

Ptec™ ionizers are reliable products with a long service life. If you feel your unit is not operating properly, turn off the unit and disconnect the power cord. Contact Transforming Technologies' Technical Support for repair assistance.

Troubleshooting

The information below provides a reference for problems that may arise with your IN4000PE ionizing air nozzle. If you have other problems not covered below, please contact Transforming Technologies' Technical Support for repair assistance

Problem	Causes
<ul style="list-style-type: none"> Balance outside specifications. Alarm light activated 	Emitter points are dirty, damaged or not straight. Clean or replace Low HV output, call for repair Unit is arcing, call for repair Short circuit, call for repair

Power and Gas Connection

Caution 	<p>Do not use this ionizer in an explosive environment! Corona ionizers produce a weak plasma that can cause ignition in explosive environments.</p>
---	--

- Attach the IN4000PE to the gas line using the appropriate tubing. The IN4000PE comes with a 1/4" quick release connector. Adjust pressure as required.
- Connect the power cord to its corresponding inlet on the base of the ionizer.
- Make certain the unit is grounded.
- Turn the unit on with the red "On - OFF" button.

Operation

Caution 	<p>The IN4000PE operates only with clean dry air (CDA) or nitrogen (N2). Operator must provide clean and filtered incoming gas to remove moisture, oil and particles from the source supply.</p>
---	--

- When an object comes within 30cm of the photoelectric eye, a stream of positive and negative air ions is triggered.
- A green light labeled "Power" will illuminate to signal the IN4000PE is operating.
- The ionized airflow is directed through the nozzle. The metal neck of the ionizer can be bended to direct the flow toward work area.
- Turn the power switch off after operation.

Caution 	<p>The IN4000PE is not designed to withstand high air pressure. The product should be installed with shutoff valve upstream. The output side of the nozzle should always be at atmospheric pressure.</p>
---	--

Alarm

The device is equipped with abnormal HV alarm. The red alarm indicator light illuminates when the following situations occur:

1. Low output HV
2. Short circuit
3. Abnormal HV discharge
4. Wet air flow
5. Frequent turning on and off of the photoelectric switch in a short time.

Caution 	<p>The only serviceable parts inside the ionizer are the replaceable emitter points. Any unauthorized service will void the warranty and may result in additional repair fees.</p>
---	--

Ionization Performance

The ionization performance is tested according to American EOS/ESD-STM3.1-2000 standard.

References are as follows:

Air pressure(kgf / cm ²)	45	55	70	85
Positive decay time (sec)	0.5	0.4	0.3	0.2
Negative decay time(sec)	0.5	0.4	0.3	0.2
Ion balance(V)	Less than 0±30V			

Note: The test results will vary slightly due to different test conditions.

Periodic Maintenance

The only regular maintenance required for the IN4000PE is the periodic cleaning of the emitter point. Emitter point cleaning affects the static decay ability of the ionizer and is important for maintaining its optimal performance.

Follow these instructions to clean the emitter points:

1. Remove the output nozzle (threaded).
2. Moisten a swab in the IPA solution and wipe the emitter point until it is free of particles.
3. Make certain the emitter point is straight and undamaged.
4. Replace the output nozzle.
5. Make sure the emitter points are dry before turning on the power

Emitter Point Replacement

The IN4000PE uses tungsten alloy precision etched emitter needles. Contact Transforming Technologies for information about ordering replacement emitters.

Because the IN4000PE high voltage output is AC, emitter erosion from the ionization process on the electrodes is minimal. Unless physically broken or stressed, the IN4000PE emitters should last the life of the ionizer.

Follow these instructions to remove the emitter points:

1. Turn off and disconnect the unit from the AC power.
2. Remove the output nozzle.
3. Unscrew the emitter point using needle nose pliers.
4. Replace and tighten the new emitter using the same tool. Do not over-tighten.
5. Make certain the emitter points are straight and undamaged.
6. Replace the output nozzle.
